E-cigarettes in Multi-unit Housing

Electronic smoking devices, commonly referred to as e-cigarettes, use a battery to heat a liquid nicotine solution called "e-liquid." The heated liquid creates an aerosol that is inhaled into the lungs. The devices have a variety of names including e-cigs, hookah pens, vapes, and mods.¹

Some e-cigarettes are made for one-time use and others can be recharged and refilled with e-liquid. E-liquid is often flavored to taste like fruit or candy. This makes them very popular among teens and young adults.¹

Health Risks

E-cigarette aerosol contains nicotine and harmful chemicals, just like tobacco smoke.¹

Some of the chemicals in e-cigarette aerosol are known to cause cancer, birth defects, and other health problems.¹

Long-term exposure can hurt brain development in children and teens.¹

Hazardous for Children

E-liquids come in fun flavors like bubble gum, cherry, and chocolate that appeal to children, who may taste or drink the liquid.¹

E-liquids are **poisonous if swallowed.** Even a small amount can be deadly to a child.¹

Danger of Explosion

E-cigarette batteries can explode and burst into flames.²

People have suffered severe burns and broken teeth when their devices exploded.²

Highly Addictive

E-cigarettes are addictive, just like regular cigarettes.1

E-cigarettes do not help people quit smoking cigarettes and can lead nonsmokers to start smoking.¹

10 x

E-cigarette use increased ten times among high school students from 2011–2015.3

4x

Teens who use e-cigarettes are **four times** more likely to start smoking regular cigarettes.⁴

Why Include E-cigarettes in Smoke-Free Housing Policies?

Eight states, including California, already prohibit e-cigarette use in workplaces, restaurants, and bars to protect employees and patrons.³

As e-cigarette use rises, the number of explosions and fires in the home is likely to increase.²

Adding e-cigarettes to smokefree housing restrictions is an easy way to **protect your tenants' health and limit property damage.**
